Hands-on Cloud & DevOps Engineer with 4 years experience in AWS architecture, Kubernetes orchestration, CI/CD automation, and scalable Infrastructure as Code delivery.

Key Highlights

- 4 years in Cloud, DevOps, and Infrastructure focused on AWS, Kubernetes, and container orchestration.
- Led CI/CD transformation and GitOps adoption, driving automation, zero-downtime releases, and modernization.
- Collaborated with engineering teams, architects, and leadership to deliver scalable, cloud-native solutions.
- Skilled in Well-Architected Framework, Landing Zones, IaC, DevSecOps, and cloud architecture.
- Driven to create impactful solutions through strategic thinking, execution excellence and team enablement.
- Certified Kubernetes Application Developer (CKAD), AWS Solutions Architect, and Certified Jenkins Engineer.

Technical Skills

- **Programming Languages/OS/Databases:** Python, Golang, Bash Scripting, Linux, MySQL, Redis
- **Cloud/DevOps:** AWS, Microsoft Azure, Terraform, Jenkins, Argo CD, GitHub Actions, GitLab CI
- **Containerization Tools:** Docker, Kubernetes, EKS, ECS, Istio, Helm, Ingress Controller
- **Observability:** Prometheus, Grafana, CloudWatch, Elastic Search, Logstash, Kibana, DataDog
- **Tools:** Git, Jira, SonarQube, Maven, Defect Dojo, Syft, Gripe, Semgrep, RESTful APIs

Education

- **Master of Science in Information Systems** - The University of Texas at Dallas, TX, United States
- **Bachelor of Engineering, Computer Engineering** - Savitribai Phule Pune University, MH, India

Professional Experience

Senior DevOps Engineer – Teckfortune Inc

Jul '24 - May '26

Teckfortune is a cloud managed services and digital engineering company. In this role, I own CI/CD, infrastructure as code, and observability, driving fast, reliable releases and engineering excellence.

- Built a GitLab-based CI/CD pipeline with Docker, Terraform, and Argo CD that cut deployment time by 65% and enabled 20+ zero-downtime releases per week through automated GitOps promotions.
- Containerized 25+ services with Docker and deployed them on Kubernetes, improving rollout stability and preventing issues during expected traffic increases.
- Configured Prometheus and Grafana dashboards and alerts, reducing time-to-detect production issues from 25 minutes to under 10.
- Integrated Syft, Gripe, and linting checks into GitLab CI, consistently catching critical vulnerabilities and blocking them before deployment.
- Standardized Java build workflow using Maven, improving artifact consistency and reducing build failure by 30%.
- Supported two Agile teams in adopting DevOps practices by improving pipelines and release workflows, reducing their release cycle from 10 days to 3 days.

DevOps Engineer Intern - University of Texas at Dallas

Jan '24 - May '24

University of Texas at Dallas is a top computer science research university. As DevOps Engineer under Professor Tejas Shroff, I contributed in cloud infrastructure and automation for cutting-edge research projects.

- Automated Lambda and DynamoDB provisioning with Terraform to support a real-time EC2 alerting dashboard, reducing manual setup effort and improving reliability.
- Developed a Python-based GitLab pipeline monitor that sends Slack alerts on failures, helping teams respond to broken builds much faster.
- Scaled Grafana Mimir to handle metric ingestion from 130+ EC2 instances, improving visibility into replication and performance tuning.

Cloud Engineer - Balasai

Sep '21 - Aug '22

Balasai is a cloud infrastructure and web hosting company. In this role, I managed hosting environments and server infrastructure, improving system reliability, security, and uptime for client applications.

- Led 5+ AWS Well-Architected Reviews, identifying improvements that saved over \$35K and strengthened overall system resiliency.
- Designed and deployed EKS-based microservices with NGINX Ingress and ALB, supporting frequent zero-downtime releases across daily deployments.
- Integrated Trivy security scans, blocking 240+ critical vulnerabilities before production and cutting security remediation cycles from 2 weeks to 48 hours.
- Implemented observability with Prometheus, Thanos and Grafana, reducing SLA violations and improving response time during production issues.

DevOps Engineer - Softman Infosolutions

Oct '20 - Aug '21

Softman Infosolutions is an IT services firm delivering cloud solutions. In this role, I architected high-availability AWS infrastructure for 10+ users and containerized services with Docker, saving \$3.2K/month.

- Streamlined infrastructure operations by automating 100+ cloud resources with Terraform, accelerating delivery cycles and reducing configuration inconsistencies.
- Built CI/CD pipelines using Jenkins, shortening lead time and supporting 20+ application releases per week.
- Integrated SonarQube, Nexus, and JUnit into the build process, helping catch critical issues early and maintain high test coverage.
- Architected high-availability AWS infrastructure (EC2, ALB, RDS, S3) for 10K+ users, improving performance and reducing monthly costs by \$3.2K.

Projects

Web 3-Tier File System | JavaScript, Python, HTML, Flask

- Engineered a highly available and cost-effective 3-tier web application for uploading, updating, deleting and downloading files in S3, accessible over the public internet through Route 53.
- Developed RESTful APIs to streamline communication between frontend and backend, facilitating future integrations and automated workflows.
- Optimized deployment readiness using Nginx, ensuring high performance and simplified deployment processes.

End-to-End AWS Deployment with CodePipeline & Docker | ECR, Docker, CodeBuild, IAM

- Provisioned AWS infrastructure (S3, ECR, Beanstalk) via Terraform, reducing setup time from hours to minutes.
- Enabled cross-stack application support (NodeJS, Python) using Dockerized pipeline and custom build workflows.
- Maintained fully versioned and reproducible environments, ensuring scalable and consistent deployments.
